

**FORMERLY USED DEFENSE SITES, PROGRAM SUPPORT,  
U.S. ARMY CORPS OF ENGINEERS  
Nationwide**

Presidio Systems Inc. (PSI) supports the U.S. Army Corps of Engineers (USACE) managing the environmental restoration program for Formerly Used Defense Sites (FUDS) located across the United States. Under these assignments, PSI focuses on the assessment and cleanup of contaminated sites caused by former U.S. military activity after WWII, supporting DoD's technical guidance for the Defense Environmental Restoration Programs (DERP).

The scope of PSI's support services includes performing preliminary assessments by gathering data from documentary sources to identify the potential presence of hazardous, toxic, radioactive, ordnance, or explosive wastes. PSI also performs more detailed environmental site investigations, conducts cleanup feasibility studies, and implements remedial actions as needed.

### PSI'S SUPPORT ON FUDS PROGRAMS INCLUDES

- Contaminated Soil Excavation
- Landfill Capping and Closure
- Remedial Action Implementation
- Hazardous Waste Management, Transportation and Disposal
- Groundwater/Soil Vapor Treatment System Installation and O & M
- Industrial Site Closure and Facility Decommissioning

- Environmental Remediation and Construction
- Storage Tank Removal and Closure
- Tank, Structure and Equipment Decontamination
- Waste Characterization, Segregation and Packaging
- Slope Stabilization
- Construction Oversight and Quality Assurance
